

Security & Trust Statement

Public description of the See The World Travel security architecture

Effective date: 29 September 2026

Website: <https://seetheworld.co.za>

Postal address: P O Box 615, Halfway House, 1685, Midrand, Johannesburg, Gauteng Province, South Africa

1. Security model

The platform uses layered application, hosting and operational controls designed to reduce confidentiality, integrity and availability risks.

2. Application controls

Controls include HTTPS-only production access, secure sessions, CSRF/origin validation, input validation, prepared database queries, role-based access, rate limiting and restricted administrative functions.

3. Document security

Restricted travel documents are encrypted before storage and kept outside the public web-document path. Access is tied to authorised users and trips.

4. Logging and evidence

Sensitive actions such as authentication and protected-document access are logged. Audit records are intended to support investigation, accountability and service recovery.

5. Payments

Raw card numbers and CVV information are excluded from the application boundary; hosted/tokenised payment processing is required when card payments are enabled.

6. Cryptographic agility

The architecture maintains a cryptographic-inventory and migration mindset so algorithms and key-management choices can evolve as standards change. No live post-quantum protection claim is made unless the deployed end-to-end path is verified.

7. Certifications

See The World Travel does not claim ISO, PCI, FIPS, SOC or other independent certification unless an applicable certificate or attestation has actually been obtained.
